

# Handscanner

## Quick guide

### How to use it

#### Pre-Operation Preparation:

- Carefully remove the handheld scanner from its packaging, ensuring all components are present and undamaged.
- Verify that all necessary accessories, such as cables and storage devices, are available and functional.
- Configure settings such as resolution, scan area, and data formats as per project specifications.

#### Data Collection Process:

- Begin the data collection process by systematically scanning the designated areas or objects.
- Follow provided procedures for scanning techniques, ensuring comprehensive coverage and accuracy.

#### Post-Operation Maintenance:

- Perform routine maintenance tasks on the hand scanner device to ensure optimal performance and longevity.
- Document the entire operation, including any issues encountered, solutions implemented, and lessons learned for future reference.
- Archive the collected data and associated documentation in accordance with company policies and regulatory requirements.

### Data transfer

#### Uploading Data to Company Servers:

1. Connect to the company's secure network or designated portal for data upload.
2. Follow established protocols for data transmission, including encryption and authentication measures.
3. Verify successful upload and confirm receipt of data on the company's servers by designated storage platform.

### Support

Our team will initiate the data processing using specialized software and tools, adhering to predefined algorithms and parameters to deliver optimized 3D model of the object providing following results:

- Dimensional reports, visualizations, exports an output data conversion required by project specifications
- Processed data publication and sharing by designated web portal services for access by authorized stakeholders.
