

Quick Manual

Ayelix is a solution that can give you access to QUICK 360° degree photos and point cloud dat, so you can measure, document and collaborate with your team from anywhere you want.

Quick Manual

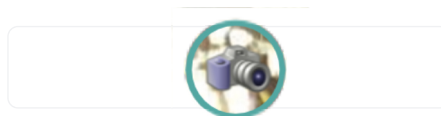

To receive access to Ayelix Portal please Register yourself on the site. Do not forget to register with your active email address as it can be important while activating the account.

Navigation

In the main navigation we have **Data explorer** – homepage where you can find all sites listed. Click on one of them and on the there will be all levels or areas listed. Choose one and you will see GA drawing embedded on the coordinates of the object with round colored points on it.

While being in the particular Capview you can go to other Capviews in the neighbourhood by clicking on the camera icon. You can also rotate yourself in the capview by clicking and moving the screen.

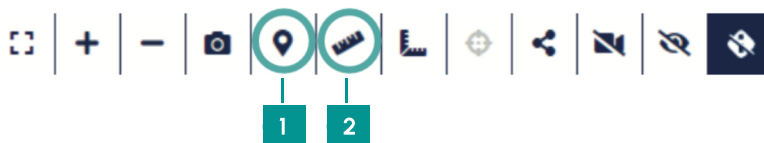

Additionally you can add bookmarks (on the map or directly in the Capview) to easily go back to the particular position or add TAG/annotation to share valuable info about equipment or notification with other colleagues or just leave it for yourself.

Measurement

To create measurements you need to be in the Capview that is a laser scan (in the 360 view).

Click on **1** (marked on the image below) and put it where you need to check coordinates. If you want to check the distance between two points – set the first position, then set the other point and click on **2** (marked on the image) to create measurement.

To receive additional information please go to the **Support Center** page from the main navigation bar. There you can find helpful videos and also the detailed manual file. In case of any additional issues or questions do not hesitate to write to **support@ayelix.com**. We will gladly help.
